DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with James LaBarre on 3/30/2006.

The application has been amended as follows:

Please amend line 13 of claim 1 to replace "the the output values" with "the output values".

Allowable Subject Matter

Claims 1, 4, 6-9 and 11-15 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fail to anticipate or render obvious the following technical features as recited in the highlighted claims:

Referring to claim 1, the prior art fails to teach or suggest “A digital camera comprising: an optical system...; an image sensor...; a light emission system...; a plurality of light measuring elements which are disposed away from said optical axis and which sense light from said emission system that is reflected by the photographic subject and passes through said optical system; and **a controller which determines and average output value for the output values of all of said light measuring elements to set a standard value, selects the light measuring elements whose output values are less than the standard value, and controls the operation of said light emission system in accordance with the output values from the selected light measuring elements, wherein said plurality of light measuring elements are provided at different positions and detect a brightness of a common area on an image sensing surface of said image sensor at different respective angles**”.

Art Unit: 2622

Referring to claim 8, the prior art fails to teach or suggest "A digital camera comprising: an optical system...; an image sensor...; a light emission system...; **a light measuring element which is located in a space between said optical system and said image sensor such that the image sensing surface of said image sensor is located outside the photoreception range of said light measuring element to thereby sense flare light within said space; and a controller which controls the operation of said light emission system in accordance with the light sensed by said light measuring element**".
